

Conv-BN-LIF $\times 2$

The diagram illustrates a PFA ResNet Block. It features a main processing path consisting of a green rounded rectangle labeled 'Conv-BN-LIF $\times 2$ ' followed by a blue rounded rectangle labeled 'PFA'. A residual connection is shown as a dark blue arrow that bypasses the main path, starting from the top and ending at a circular addition node (a circle with a plus sign) below the 'PFA' block. A skip connection is shown as a dark blue arrow that starts from the top, goes right, then down, and finally left into the same circular addition node. The entire block is enclosed in a dashed yellow border.
